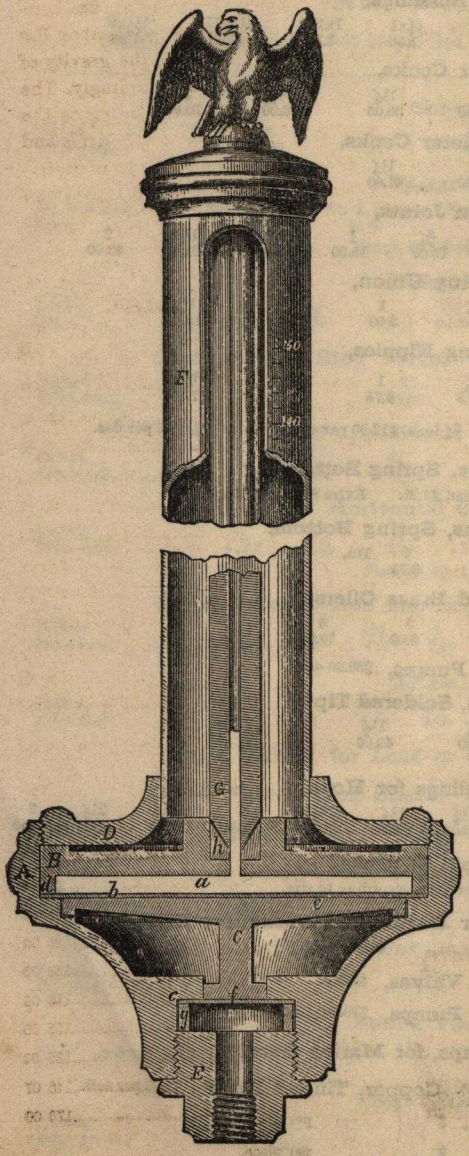
— PATENT —

RESERVOIR MERCURY PRESSURE GAUGE

For Stationery, Marine and Locomotive Engines,

COMPACT, DURABLE, AND ALWAYS A PERFECT TEST GAUGE, MEASURING BY THE ACTUAL WEIGHT OF MERCURY.



☞This Gauge is always true to the Registering Scale, under any variation of Temperature.

☞It is the most compact Gauge under high pressure, of any Mercury Gauge now made.

This Gauge is singularly Compact in form, being only about 18 inches in height, Simple in Construction, not liable to injury, and made in the strongest manner.

IT IS ALSO

DECIDEDLY CHEAP.

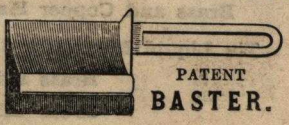
J. A. WAGENER'S

Patent Double-Lock

SEWING MACHINE & BASTER,

Including all the late and new Patent Improvements and Adjustments; combining Shaw's Patent mode of throwing crank over dead centre, thereby preventing any backward movement.

PRICE, $40.00.



PATENT
BASTER.

J. C. CLINE'S

PATENT

CENTRIFUGAL GOVERNOR.

For Stationery and Marine Engines.

"When the balls are rotated by a belt on the pulley (H,) they recede from the centre, and carry the sliding collars on the spindle with them: to these collars the Valve-rods are connected by levers as usual. The motion of the balls to or from the centre depends upon the velocity with which the Machine moves—if it is not great enough to overcome the gravity of the balls, they remain inert; but on an increase of speed, vary their position accordingly. The sensitive increase of this Governor is materially increased by the action of the spring on the arms. As the arms are expanded they slide up in the tubes at the top: shorten the arms and consequently overcome the velocity at which they move. Between the combination of centrifugal force and this peculiarity, the Governor possesses extreme sensitiveness when made so as to slide easily in the upper tubes."
